

PLANTING RATES:

Drill 5 Lbs. Per Acre / 8 Lbs. Broad Cast

PRODUCT DESCRIPTION:

Ladino Clover is a perennial clover that is well adapted for the deep south. In addition to regrowth from stolons, Ladino Clover is a good reseeding clover, and starts growing early in the spring. It has excellent grazing tolerance and contains no cyanide. It is great for Florida cattle and horse pasture application. By overseeding Florida horse and cattle pastures with Ladino Clover, you will increase protein forage during the early spring dry season. It is also excellent for deer, turkey, and other wildlife in the deep south.

PRODUCT INFORMATION:

- **Application or Use:** Cattle Forage, Livestock Grazing, Food Plot, Cover Crop, Erosion Control, Ground Cover
- **Germination Time:** 7 - 14 days, under optimal conditions
- **Height:** 8 - 12 inches
- **Sunlight Requirements:** 4 - 6 hours
- **Advantages:** Especially responsive to cool, moist conditions due to shallow root system.
- **When to Plant:** Recommended planting time is fall and spring when night time temperatures are consistently between 50 and 65 degrees.
