

**PLANTING RATES:**

Drill 5 Lbs. Per Acre / 10 Lbs. Broad Cast

**PRODUCT DESCRIPTION:**

Plant in late Winter or early Spring for a spring crop or in the late Summer for a Fall or Winter crop. Scatter the seeds and rake them in or plant them thickly in a straight, narrow line. Cover the seeds about 1/2 in. deep. Very thick stands will have to be thinned to allow for good root formation. To ensure good germination and emergence, frequent, light watering may be needed.

If the weather is dry, irrigation during the root development stage will give the best quality roots.

**PRODUCT INFORMATION:**

- **Application or Use:** Pasture, Cattle Grazing, Food Plot, Cover Crop
- **Germination Time:** 5 - 7 days, under optimal conditions
- **Height:** Up to 2 feet
- **Sunlight Requirements:** 4+ hours
- **Advantages:** Provides soil fixation along with being an excellent source of protein for deer and other wildlife.
- **When to Plant:** Recommended planting time is spring and fall when night time temperatures are consistently below 65 degrees.

**PRODUCT DETAILS:**

- Wildlife food plots
- Well drained soil
- Cold hardy
- Thrives in many types of soil
- Brassica, cover crop

**WEIGHT:** 50 lbs

**UNITS PER PALLET:** 40
